

For Immediate Release:

Easy Cut Studio Introduces New Updates with Nesting Feature

Further increasing productivity are the precision integrated true shape nesting capabilities.

NEW YORK, United States, Nov. 20th, 2023 -- EasyCut Studio, a worldwide leading developer of sign-making software solutions, has launched a new enhancement to its industry-leading vinyl cutting software, Easy Cut Studio, which now includes true shape nesting. this enhancement tool takes sign making to a whole new level. Efficiently nest all your objects to save on time and material.

Nesting is the process of placing your design as efficiently as possible to save on production materials. This new feature enables all users to reduce their material waste in average by 40%. The intuitive and powerful option improves the arrangement of multiple objects per job by rearranging the objects based on their actual shape.

“Thanks to the latest updates, the newly added nesting feature efficiently nest all objects to save on time and material, designers can enjoy creating more in less time,” said Eric Lee, Senior Product Manager for EasyCut Studio. “Starting from now, users will be able to upgrade their Easy Cut Studio to Version 5.026 in order to experience the full range of new Nesting features and improvements. It's simple, intuitive, fully automatic , and no training is needed.”

In addition to the new nesting feature. this update also includes more than 10 new cutter drivers, the official support of macOS Sonoma, several bug fixes, compatible with several new vinyl cutters and improvements to the stability and performance of the software, enabling users to design, print and cut more efficiently than ever before. So this latest version will definitely amaze you.

Easy Cut Studio Release v5.026 includes a host of new features, including:

- Fixed a problem with incorrect dimensions for Print+Cut groups.
- Fixed a problem with Print+Cut with Janome Artistic Edge 15 cutter.
- Fixed crash issue when printing and cutting with KNK Force cutter.
- Performing the advanced nesting by moving the object including the rotation.
- Fixed a problem with manual laser alignment with Titan.
- Fixed crashing problem with offset path.

- Fixed the issue of incomplete cutting or random cutting.
- Fixed the issue where users were unable to connect to the Summa machines via USB.
- Adds support for JiaChen JC-E, JiaChen JC-H and JiaChen JC-DS series.
- Adds support for UKCutter V-series.
- Adds support for Vevor KI series.
- Other stability improvements.
- Official Support for Windows 11 and macOS 14.2 Sonoma.
